

Immunocal Platinum

Just like regular Immunocal, it will:

- Raise cellular glutathione
- Support the immune system
- Detoxify the liver
- Provide your body with its most powerful antioxidant

In addition, the Platinum version contains:

- CMP – cytokine modulating proteins, which regulate inflammation and help with tissue repair, while slowing down aging.
- RMF – redox modulating formula of citrated minerals which lowers acidity in the body helping to restore a neutral pH.
- Creatine – supplies energy to muscles helping with both strength and endurance (400mg per pouch).

I recommend Platinum for athletes and anyone with higher metabolic demands, including older adults.

**Immunocal Platinum is derived from milk and contains whey.
It does not contain Lactose and is safe for dairy sensitive individuals.**
